About Me

I have been coding for fifteen years, starting as a hobby and evolving into a professional career over the past decade. During my first job at KatioStudio, I learned that a developer not only needs to be "good", but also needs to be curious and not afraid to make mistakes and learn from them. That's been my motto since.

I approach challenges with an "out-of-the-box" mindset, always driven by questions like, "How does this work?" and "Why did we do it this way?" This curiosity has fueled my continuous growth, resulting in a versatile skill set. Whether it's managing client requirements, building CI/CD pipelines to streamline development, designing the architecture for Spain's first online credit insurance service, or simply coding a client contact form, I thrive in all stages of the development process.

Work Experience

Crealsa Investments Spain

11/2016 - Now

Senior Backend Developer & Solutions Architect
